

Gallenberg Technologies'

BeachMaster™

Beach Cleaner

The Ultimate Beachcomber

Keeping beaches, especially recreational areas, free from debris has always been a challenge — until now. The Gallenberg Technologies' **BeachMaster™** consistently picks up items as small as a cigarette butt to objects as large as tires, cement blocks and four-foot driftwood logs — all without removing precious sand or disturbing the surface significantly.

The one-yard load capacity, nine-foot dump height and extended reach of over six feet are standard equipment — along with the grooming attachment which leaves a beautiful finish.

The BeachMaster™ picks up bottles without breaking them.

The standard grooming attachment creates a beautiful finish.

Beach Cleaner
AE50 Award

Effective Everywhere

The key component in the effectiveness of the BeachMaster™ cleaning system is in its unique sweep-and-sift technology. A dual-belted sweeper system provides 100% surface contact — unmatched in the industry. The design incorporates a cleaning width of more than five feet and effectively picks up debris and litter at speeds up to 10 mph.

This incredible machine performs equally well in both wet and dry conditions and is the only piece of equipment on the market today with an adjustable cleaning range of zero to eight inches.

The BeachMaster™ is effective on a variety of surfaces:

- Beaches
- Golf courses
- Playgrounds
- Volleyball courts
- Ball fields
- Roadways
- Grass
- Any sandy area

Gallenberg Technologies has also designed a walk-behind model for smaller areas. Its compact size makes it easy to transport from one location to another and its performance is just as impressive as the larger model.

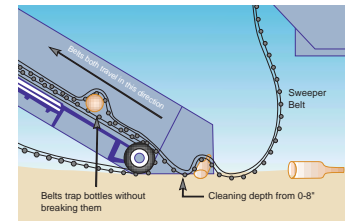

Anyway you sift it,
nothing outperforms
the Beachmaster
